January 09, 2018

Attention: Mrs. Fischer

Subject: December 2017 Monthly Report

On the billing cycles ending on the 22nd of December 27,890,000 gallons of water were used by our consumers, an average of 929,666 gallons was used per day.

On December 26, 2017, filter #2 influent valve was stuck close preventing the filtration process. An alarm was activated and operators responded and made the necessary adjustments. The manufacture was notified of the faulty valve and will troubleshoot or replace if this issue continues, as it is still under warranty.

On December 29, 2017, filter #2 plastic beads were observed floating on top of the filter. This indicated that there was an opening on the clarifier screen. As raw water passes upward through the plastic beads, the beads entrap the floc and the screen holds the plastic beads in place, preventing from spilling over to the filter side. The Holt Group has become aware of this issue and will be contacting Pacific Hydrotec and discuss the warranty. There were no violations or water quality issues on either of these problems.

If you have any questions, please contact me at (760) 427-4685

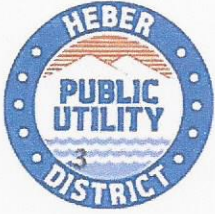

Sincerely,

A handwritten signature in blue ink, appearing to read "Francisco Rodriguez".
